

# Solution Architecture

Date	10 October 2022
Team ID	PNT2022TMID14654
Project Name	Hazardous Area Monitoring for Industrial Plant powered by IoT
Maximum Marks	4 Marks

Proposed Architecture:

## Project Description

*Our Project is mainly based on Internet Of Things(IOT) and the details of the project and its working conditions are given below:*

The area is integrated with smart beacon devices which will be broadcasting the temperature of that particular area.

Every person working in those areas will be given smart wearable devices which will be acting as beacon scanners.

Whenever the person goes near the beacon scanners he can view the temperature on his wearable device and if the temperature is high, he will receive the alerts to the mobile through SMS using API.

Through this wearable device, the data is sent to the cloud and through the dashboard, the admins of that particular plant can view the data and take necessary precautions if required.
